# POPULAR Only 40p. Computing WEEKLY

3-9 January 1985

*It's the best selling weekly*

Vol 4 No 1

## Acorn's C confirmed

ACORN has now confirmed that it is to launch a 'C' computer next year (see *Popular Computing Weekly*, December 20).

The 'C' will be an Acorn developed machine, and not

part of the BBC's range. 'C' stands for 'communicator' and the machine is planned to be a direct competitor for ICL's new QL-based One Per Desk (OPD).

The Acorn C micro is likely

to feature a telephone handset, at least 128K Ram, a flat-screen, liquid crystal display, and built-in disc drive, and use the pseudo 16-bit 68C816 chip, which is pin-compatible with the 6802.

According to Acorn's managing director Chris Curry, the C will undercut ICL's OPD, which sells for £1,900. The price for the C is expected to be pitched between £800 and £800.

The development of the 'C' which will eventually appear in several versions, has been kept a closely guarded secret. "The research team have been working in offices completely separate from Acorn's headquarters to help prevent news leaking out," said Acorn's marketing manager Gwyn Matthews.

The first C micro is unlikely to be launched before this summer.

## Lynx comes out of hibernation

CAMPUTERS, which after seven months in liquidation was bought last week, has a new range of hard disc based micros at an advanced stage of development.

The assets of Computers, and the rights to the name 'Lynx' have been bought by a company Anston Technology, for a sum reported to be around £24,000.

Anston Technology was set up specifically to buy Computers by Alex Chapman of Braefield-Chapman, a company which Computers subcontracted to package and ship the Lynx computers, and Dick Greenwood, formerly Computers chairman.

"We will be manufacturing again, although it is too early to say now which direction Anston Technology will go in," said

## Hitchhiker's Guide on C64

THE Hitchhikers Guide to the Galaxy, which started as a radio series on the BBC, and became four books, a TV series, two records and a stage show, has now been launched as a computer game.

American adventure giant Infocom has released Hitchhikers as a text-only adventure, using sophisticated input, and the ability to 'talk' to other characters in the game.

While the opening scenario is similar to that of the original story, the adventure does not rigidly follow the

action thereafter.

The player takes the part of Arthur Dent, befriended by the seemingly human Ford Prefect, who helps Arthur escape to his native planet, Beetlejuice 5, while Earth is demolished to make way for an interstellar by-pass. Their intergalactic adventures form the plot of the story.

Currently the Hitchhikers Guide to the Galaxy is available only for the Apple II in the UK, but a Commodore version should be imported within the next two months.

**INSIDE } ENTERPRISE 64 REVIEW — WORTH THE WAIT? }**

# Alice

## IN VIDEOLAND

**NOW  
ON  
CASSETTE!**

## PURE MAGIC!

Join Alice in her journey through Videoland - an enchanted place populated by strange creatures such as bread-and-butterflies and pipe smoking caterpillars; where little girls change size and flamingos turn into croquet mallets!

Alice in Videoland is a revolutionary new concept in entertainment for the Commodore 64, incorporating some of the finest graphics ever seen on any home computer, accompanied by a charming musical score. There are four different game scenes involved, and your performance in earlier ones will affect your ability to get through later ones and determine your eventual total score.

**Scene One** - Stunning title page graphics give way to the first game scene as Alice falls into the rabbit's warren. Score points for collecting the objects to be found there - including keys to open doors, bottles to make her smaller, cakes to make her bigger!

**Scene Two** - Out in the garden the Cheshire cat looks on as Alice meets the pipe-smoking caterpillar. Help her to catch the bread-and-butterflies and the rocking-horse flies that change into the balls used in the croquet game in the last scene!

**Scene Three** - Alice is a pawn in the chess game where her opponents are the Jabberwocky and Tweedledum and Tweedledee. Help her across the board by protecting her with your White Knights!

**Scene Four** - The most bizarre croquet game ever! Help Alice hit the balls through the playing-card-soldier hoops before the Queen of Hearts stomps on them!

Alice in Videoland is available for the Commodore 64 on disk - £12.95, and now on cassette - £8.95.

Alice in Videoland features graphics created with the Koala Pad.

**Audiogenic** LTD

All the signs point to a big shake out among software houses in the coming 12 months.

On the face of it any reduction in the number of companies producing software looks like a bad thing resulting in fewer programs to choose from.

The problem is that too many companies are producing average quality titles in big enticing packaging. How many times have you bought a program in a fancy box which turned out to be hopeless? All too often I suspect.

People can only be expected to fall for that trick once though, as a number of companies are now discovering to their cost.

The most encouraging aspect of the current upheavals is that sheer weight of money is not enough.

Some very big companies — household names — have dipped their toes in the software water — and found the going tough. Yet a good program still sells, even if it comes from a small new company — like Gargoyle or Microsphere II for example.

British Telecom recently paid an unprecedented sum for the 280 rights to *Elite*, but it will only see that money back if the conversions are technically excellent.

The current uncertainties have made companies a little nervous. Last week the industry held its annual awards presenting itself with twenty or so awards — none of which recognised positive achievement in 1984 — take the Software House In Trouble Award as being fairly typical.

Yet, the companies which survive the shake-out will be the ones which produce the most original and technically superior titles.

And the result should be a strengthened industry with fewer, better programs.

# Salamander SOFTWARE DISCOUNT CLUB

FREE  
STICKERS

FREE  
MEMBER  
SHIP

## THE OPENING LETTER

Dear Dragon Owner,  
Are you tired of being left in the lurch trying to find quality Dragon software in the shops? Relax! Now Salamander Software brings you the Software Discount Club which offers the best value in one of the widest ranges available.

As we promised here are the further stupendous discounts on our entire range.  
Just clip the coupon below — and get free membership to the Salamander Software Discount Club and see how much you can save. Membership gives you further discounts — a minimum of £2 and possibly much more on any future order.

If you are already a member you will be entitled to a further £2 off the discounts listed below but please quote your membership number when ordering. Greater bargains will be had on our stand at the 6809 Computer show on the 17th and 18th November at the Royal Horticultural Halls. So see you there!  
Send today and bring out the best in your Dragon with the Salamander Software Discount Club.

## Computers

Dick Greenwood. "I have been brought in at Anston as a consultant, and at the moment I am correlating all the information regarding technical, sales and marketing aspects to the computers."

We have also bought remaining stocks of Computers machines and peripherals, which will all be available from Anston."

Computers' former managing director Stanley Charles is not currently involved with the new company. "I've had discussions with the new owners

and expect to be meeting with them soon," said Stanley.

"I am delighted that someone has purchased the project, although with the amount of time the company has been down, some radical changes will need to be made."

"When the company went into liquidation, there were plans in development for a complete new range of machines, including a new machine using semi-hard discs with a huge storage capacity. The prototype of that machine was shown at the Paris Micro Expose in May last year, and very little work would be needed to complete it," he continued.

## Ghostbusters hits the Spectrum

**GHOSTBUSTERS**, the top-selling Commodore 64 game, is now available for the Spectrum.

The game, produced by Activision, is closely based on the hit film of the same name.

The quality of the speech and music which characterised the Commodore version has, inevitably, had to be modified for the Spectrum, but the strategy and plot of the game itself remains the same. An MSX version is also being developed, to be launched in the next two months. *Ghostbusters* on the Spectrum costs £9.99.

## Tansoft expands Oric catalogue

TANSOFT has begun expanding its catalogue of programs for the Oric by completing negotiations to market titles in the UK by leading French software houses.

The Oric Atmos, despite its lack of success in Britain, is a market leader in France, where it apparently outsells the Spectrum.

"We are currently evaluating software from a number of French companies, including Innelec, Infogrammes and ASN, which distributes the Oric Atmos in France," said Tansoft's Adrian Rushmore.

"Tansoft's aim is to build up a bumper catalogue using as many French titles as we can. We hope to begin launching the programs by the end of January — the first titles will be mainly arcade and strategy games, though there will be at least one graphic adventure."

Tansoft is also building up a catalogue of non-Atmos games, a new step for the company, which has produced exclusively for the Oric 1 and Atmos until now.

"We have acquired the catalogue of Voyager Software, which includes titles such as *Quasar* and *Grabit* for the Commodore 64, *Avenger* on the Dragon, *Trilogy* on the Vic

## Pocket TV shortage

SINCLAIR has once again fallen into the 'supply and demand' trap. The numbers of its pocket TV available before Christmas fell far short of orders placed.

The TV was distributed to three retail outlets, John Lewis, British Home Stores and W H Smiths in the second week of December.

"We've had enough to supply about twelve models per branch," said a John Lewis spokesman. "They sold out very quickly. Our next batch will arrive, we hope, at the end of January." The picture is the

same at British Home Stores and W H Smith.

"I don't know when the next lot is due to arrive," said BHS's consumer electronics buyer Martin Wallington.

A spokeswoman for W H Smith commented "a few are still coming in each week, and

we are concentrating supplies at our shop at Waterloo Station and Heathrow Terminal 2.

A spokesman for Sinclair commented, "The pocket TV was intended as a pre-Christmas launch in very limited quantities, and Sinclair made that quite clear in all the retailers concerned. Production at Timex in Dundee is set to step up sharply in the first quarter of this year. The ultimate target is to produce one million per year, though that won't necessarily be in 1985."

## Quicksilver split

MARK Eyles and Caroline Haydon the last two members of the original team which set up Quicksilver three years ago, have left the company.

They have left to set up a new company making holograms.

The two have built one of the few holographic laser studios in the country to produce commercial white-light viewable holograms. Explained Mark, "We will be making both reflection and transmission types of hologram and hope to produce the first batch within the next month."

Rod Cousens, Quicksilver's managing director, said, "Mark has always been interested in holographics, and developed the idea for the company a while ago. It was very sad to see them both go, as they had been at Quicksilver for three years, and are close friends."

While neither Mark nor Caroline are to be replaced by Quicksilver, the company is to expand its marketing and in-house programming team.

## Software by bar codes

REDWOOD Publishing has released a bar code reader to replace the laborious typing-in of printed computer program listings.

The company also publishes bar-code versions of programs listed in its magazine *Acorn User*. The bar-codes are the same format as is used to label many items of supermarket food and books. Instead of typing in the listing, the user simply draws the reader — a pen-like device which plugs into the user port on the computer — across each line of bar codes to input the lines into the micro.

Redwood introduced both the bar-code listings and the reader in conjunction with the Microelectronics Education Programme and Addison-Wesley, the book publisher.

The reader, together with the software to drive it, costs £60.44, and each book of listings £1.

Details from Redwood, 68 Long Acre, London WC2.

20, *Crazy Crane* on the Spectrum and *Forbidden Fruit* for the BBC, Commodore and Spectrum. Six more non-Oric games from freelance authors will be added this month. All of these will almost certainly be converted for the Atmos," Adrian continued.

Prices for either the French games or the other titles have not yet been fixed, but all should be available by the end of this month.

Microdeal, 41 Truro Rd, St  
Austell, Cornwall

The Cuthbert cult continues with  
colossal capers in the latest  
escapade from Microdeal. It's a  
five star game all the way.

The challenge consists of over  
200 chambers! How do they do  
it? Chambers are littered with  
keys, locks, ghostly ghouls,  
beastly bats, sadistic saxophones  
— yes, saxophones — sworded  
spheres, stelevab fiends, trans-  
portation chambers and various  
treasures.

Then there are lamps to be  
filled to give temporary  
immunity from the nasties and  
extra lives to be won and lost. It  
is quite mind-boggling.

With the cassette comes a join  
the Cuthbert Club registration, a  
16 page instruction booklet —  
sorry manuscript — autographed;  
poster application with a meet-  
Cuthbert competition and a key  
job. It's superb packaging to go  
with an excellent piece of  
software.

The early stages start easily,  
but the going soon starts to get  
tough as Oxygen shortages begin  
to penalise any delay. What's  
more, negotiating a room once  
might not be enough, you may  
have to go back more than once  
to pick up more keys. But that's  
enough from me, you'll discover  
the rest when you buy it. — B.J.

## Atari winners

I cannot agree with your comments in your recent editorial that Atari games are inferior to Spectrum and Commodore titles.

The problem is not quality, but availability and price. Atari's recent price reductions and trend towards disc-based software should open up the possibilities for a proper comparison. Additionally, if software houses such as Llamasoft can convert more 'winners' for the Atari the machine's excellent graphics and sound would be apparent to a wider audience. Everyone seems to forget that most of what is happening on the Spectrum and the C64 has already happened on the Atari years ago.

Before the Spectrum and C64 people put up with awful programs only because they couldn't afford an Atari. In the last couple of years Atari may have paid the price for its complacency, but things are different now under Mr Tramel.

Look out, Sinclair and Commodore.

Paul Strong  
48 Rockford Avenue  
Shenfield  
Brentwood  
Essex

## Distribution problems

I would like to make a couple of points about the present situation of software distribution.

I tried for weeks to obtain a Spectrum game by CRL called *Olympics* from Boots, W H Smith and Tesco without success. They all stated that they had had several enquiries about this program, but it was up to Websters, and Websters alone, whether they would stock the game.

As CRL do not appear to advertise their games as much as most of the other major software houses, I can only assume that Websters feels that without this support, a game will not sell.

If this is the case, then I believe that both companies have lost out on this particular game, as it is surely the best of

all the games based on the Olympics, on the market, as you actually have to run against opposition (not only against the clock), graphics do not vanish during events, and your keyboard or joystick is unlikely to be ruined after a few plays.

Fortunately, there are a few good software stockists who eventually get most of the new releases, but those people who do not purchase magazines or rely on the big stores to stock the new games, inevitably lose out in the present distribution situation.

Surrey

## Avoid completely

I am the creator/programmer/copyright holder of the Commodore 64 game *Havoc*, currently living in Amsterdam to recover from the ordeal. (I have a very nice squat and can often be seen begging guilders at Central Station.)

While thumbing through magazines in the station bookshop I was very upset to see a review of a Spectrum version of my game (if one could call it a 'version'). I have not seen this Spectrum program and could not bear to see it.

Having worked extremely hard on the original C64 *Havoc*, I'd like to make it perfectly clear to Spectrum owners that I

had absolutely nothing to do with it and I can assure them that I feel worse about it than they.

I can only repeat your reviewer's advice to your readers: Avoid completely.

What more can I say except 'pass the sick-bag'?

A G Osborne

## Excellent investment

I was interested to read your review of the *Payroll Plus 64* program in the December 13 issue.

As a user of the program in a firm of solicitors, I would like to establish the reasons why we chose such a system in our office.

All our accounting functions, credit control, etc, are installed on a multi-user hard disc system, and for us to have installed a pay-roll system on the same equipment would have cost a four figure sum of money in software alone. This of course does not allow for the additional cost of up-dating the package, and maintenance.

Therefore, as a firm having a total pay-roll of approximately 40, we find the *Payroll Plus 64* an excellent investment and to date we have had no problems whatsoever, and have found that every eventuality has been accounted (!) for.

## Terrifying bugs

I was fascinated to read David Nowotnik's astounding revelations (December 13 issue) about the unreliability of the QL's Superbasic.

This came as quite a shock to me as I had been programming the thing for more than five months without noticing all these terrifying bugs in my midst.

It seems to me that there is a simple explanation for every one of his problems with Superbasic.

I'll tackle the 'lack of memory' problem first. The reason for the 4096 bytes being used

for nothing is that this figure includes 256 bytes of Basic pointers and the return stack used for Gosubs and procedure calls.

Why this 14K program used 26624 bytes is rather harder to understand. To start with it wasn't a 14K program because each sector of a microdrive actually contains 812 bytes of data. Multiplying 33 by 812 gives a total space of 16896 bytes and adding this to the 4K system overhead gives 20992 bytes used by his program. But this still leaves 6632 bytes unaccounted for. This memory is the difference in size between the ASCII version of the program stored on microdrive and the tokenised version of the program which is actually executed by the interpreter. This includes an overhead for the variable name lists and the variable value lists. Although this tokenisation is rather wasteful of memory, I'm afraid that's the price you have to pay for all the extended features that form the 'Super' in SuperBasic. Despite this I have already written some very large programs on the QL so I can attest to the fact that there is no real problem with its memory.

Now to get to the easy stuff. When I first discovered the 'Out of memory' error of which David Nowotnik speaks, I attributed it to a failure of error trapping to detect that the maximum number of channels had been exceeded. Exceeding this number causes some rather strange things to happen which culminate in the machine crashing. In my use of the machine I have avoided this problem by simply using less than 11 channels at any one time, which for about 98% of programming applications should be sufficient.

So I would recommend budding SuperBasic programmers to work without trepidation providing they follow the golden rule of programming -- 'if in doubt back it up', preferably on several different micro-drives.

If you do this the bugs which remain in SuperBasic should become nothing more than minor niggles.

# Put your micro to work, at home.

If you reckon there's more to your micro than playing games, but you're baffled by word processing and confused by spreadsheets, then take a good long read of Mike Grace's new book.

Home Applications on your micro cuts away all the confusion surrounding the ideas and ideals of the micro at home. It shows you the practical uses, with everyday examples that are within the reach of every micro owner. You'll discover how a database helps you with your domestic chores, and with your hobbies. You'll learn why word processing is worth your while, and how spreadsheets are tailor-made for your personal finances.

This comprehensive, jargon-free book can help you to find out exactly how your micro can help you. Don't leave your home micro without one.

## With Sound.

# RULE THE WORLD WITH 16K!

There's more sheer computing power and possibilities locked up in your new Commodore C16 than you've realised. And David Lawrence in his new Sunshine book, the Working Commodore C16, shows you exactly how to apply that power.

With a full collection of sophisticated programs for both home and business, this book contains just about every routine and application you're likely to need. And all for just £6.95. You can use these programs directly, or incorporate them as subroutines in your own work, or learn how to develop your own.

This book is also your introduction to programming in Commodore's new C16 BASIC. But, most of all, it's an excellent 'hands-on' manual to guide you through the pitfalls – and pleasures – of working with your new C16, realising its surprising capabilities, and planning how to rule the world from its keyboard!

Look out for the Sunshine range at WH Smiths, Boots, John Menzies, other leading retail chains and all good bookshops. Dealer Enquiries: 01-437 4343.

## Order form

To: Sunshine Books, 12-13 Little Newport Street, London WC2R 3LD.

Please send me \_\_\_\_\_ copies of **The Working Commodore C16** at £6.95 each.

☐ I enclose a cheque/PO payable to Sunshine Books for £ \_\_\_\_\_

☐ Please charge £ \_\_\_\_\_ to my ☐ Access Card ☐ Visa Card  
Card Number \_\_\_\_\_  
Signed \_\_\_\_\_

Name \_\_\_\_\_  
Address \_\_\_\_\_

# Escape

Can you fly over the border in your balloon and escape from the east... on the CBM64 by Stuart Myler

**T**he object of this game is to find a way across the sky, making sure not to hit a mine, or crash into a fighter or helicopter, then exit on the right hand side of the screen. (You must be high in the sky at this point, or you crash.)

Completing each screen moves you on to a harder one, until finally you safely guide your balloon over the border fence. You then have the task of manouevring your balloon down a volcano, avoiding the clouds of volcanic gas.

Use Z and X to move left/right, F5 and F8

to move up/down, and F1 to start the game. Leaving the title screen for 30 seconds puts the program into demo mode. Have fun!

## Program Notes

### Line No.

5 Disable CBM Key.  
6 Characters into w/case.  
8 Goto title screen.  
10-12 Read sprite data.  
20-75 Set sprite colours etc.  
80 Repeat keys.  
100 Clear screen.  
180-188 If S=(0 to 3) goto next screen.

285 Print high score.  
300-315 Move balloon routine.  
360-852 Print balloon, score etc.  
890-893 Detect collision.  
894-898 Detect if balloon is on a certain section of the screen.  
800 Goto start of main program.  
9000-9088 Sprite data.  
9200-9210 Finishing routine.  
9600-9820 Routine if air current is missed.  
9850-9860 Routine if you burst balloon.  
9900-9998 Title screen.  
10000-10090 Sound routines.  
10093-10120 Demo routine.

# Perchance to dream

**W**ell, folks, here it is at last! If you've been following PCW for the last few weeks you should now have two clues to help you solve this mini adventure from Star Dreams.

The first five correct answers will win a copy of the fantastic new adventure *The Sandman Cometh* (in two 48K parts) plus the outright winner will also get a bottle of vintage champagne! Ten runners up will receive copies of *Star Dreams' ZX Toolkit*

programming aid for the 18/48K Spectrum.

When you've typed in the listing, here are the instructions: The game is a cross between an adventure and a quiz. You will wander round a fairground, and you may enter each sideshow or ride. If you do you will be asked a question which you may reject as a red herring, or you may choose to answer. There are ten locations and seven of the questions are genuine. After seven questions have been answered, you will

hear seven notes of a tune. To win you must send the song title to PCW.

The questions must be answered in the correct order and this correct order can only be deduced from one of the two previously published clues. (The other clue refers to the song title.)

Direction commands are N, E, S & W and you can see all your options if you type in Vocab. Making a map would be useful.

The best of luck!

notes all at the same time).

At the press of a button, you can summon up pre-programmed rhythms and bass accompaniments to play along to.

These three rhythm combinations can be speeded up or slowed down.

You can even glissando (so long as you don't hurt yourself.)

That is, make a note slide up or pitch.

You can filter sound: reduce the treble, the bass, or both. You can save, on cassette or disk, a voice or tune for future use.

And, for better sound reproduction, you can connect

# MAKE MUSIC YOUR FORTE.

Alright, let's all gather round the computer for a good old sing-song.

You'll find the new Commodore 64 Music Maker strikes exactly the right note, whether you're an accomplished musician or whether you are an out-and-out beginner.

If you can hum and know your ABC, you can start to play famous popular tunes immediately.

No matter if you've never played a note before.

Simply type in the notes from the SFX Tutor Handbook,

then tap in the rhythm.

And, before you can even say 'Richard Clayderman,' the automatic playback fills the room with music.

Once you've become a 'piano' virtuoso, you'll quickly appreciate the Music Maker's other amazing capabilities.

You can synthesize musical instruments, even create your own 'synth' electronic sounds.

You can play notes polyphonically.

(This is the smart way of saying you can play three different

Music Maker to your hi-fi system.

Music Maker has been designed, like all our software, to get the very best out of Commodore hardware.

It's the first in a series of packages which will fully exploit the Commodore 64's outstanding musical capabilities.

Commodore software: it costs no more, even though there's more to it.

MUSIC MAKER DISK OR CASSETTE £29.95.

## UNIQUE ASSEMBLER PACKAGE

THE PACKAGE CONTAINS:

- A 100% M/C TWO PASS OPTIMISING MACRO ASSEMBLER
- A M/C FULL SCREEN EDITOR
- A 68XXX DISASSEMBLER
- AND FIVE ADDITIONAL PROGRAMS

Now you can write programs and assemble in one operation, no need to load the Editor and then the Assembler.

- Full English error message reports
- Standard Motorola Mnemonics and Directives
- As many labels as required and any length
- Very fast assembly times
- Creates Resident or Multitasking programs
- Produces a label table if required
- Fully formatted listings
- Comprehensive documentation

**ONLY £22.95 inc.**

More powerful than Assemblers  
costing more than twice as much

P/O, Cheques should be made payable to:

**D. A. BANDO,  
81 MOUNT PLEASANT,  
WEMBLEY, MIDDX HA9 1UD**

## They turn micro users into big operators.

Sunshine's great books for the BBC and Electron help you make your favourite micro into a mighty machine.

Read, and discover how to program, to create music, to draw graphics, to do maths, to produce robots and even how to give your micro artificial intelligence.

Sunshine's best-sellers are at all good bookshops now. Or order, using the coupon here. And transform you, and your micro, into something special.

## Elevated

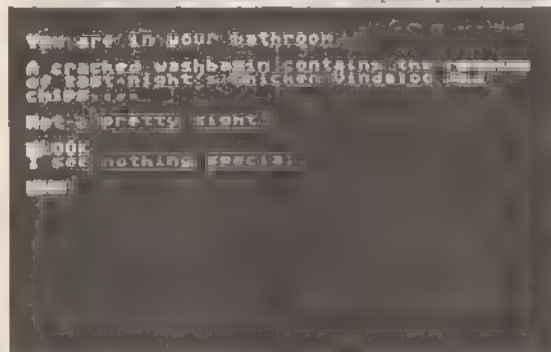

**Program Hampstead Micro**  
Commodore 64 Price £9.95  
Supplier Melbourne House,  
Castle House, Castle Yard,  
Richmond, Surrey.

**F**ancy a change from killing the troll/dragon/giant and finding endless heaps of treasure? What you need is a nice trip to Hampstead.

The software house which

Sounds simple? Aha, but to get there you have to rise from the lowest form of social life through a combination of animal cunning, social climbing and sheer commonsense. Attaining Hampstead means leaving your dingy and disgusting flat (in the wrong part of town) behind you for ever and moving through a series of increasingly elevated circles by whatever means come to hand to the Promised Land.

First explore your horrible

brought you *The Hobbit* and *Sherlock* has now demonstrated that you don't have to have graphics or even a complex instruction format if the game is funny, original and fast-moving enough. This little package should have enough of all three qualities for most people and even managed to win me over despite its male chauvinist overtones and a simple verb/noun command structure.

The object of the game is, simply, to become a Hampstead Man, a squash-playing, Guardian-reading person of means and position who, when not at home with wife Pippa and three lovely children, is more than likely to be jogging on the Heath whilst listening to Verdi on the Sony Walkman. flat thoroughly (on second

thoughts, avoid the bathroom) before leaving as you cannot get back in. There are clues in the extremely witty accompanying booklet, which together with the program manages to libel comprehensively the whole of London's NW6 postal area.

Don't forget that in *Hampstead* appearance is all, so make sure you're always dressed to the nines with your surroundings, whether they be the dole office or a top City boardroom. You'll need to know all the morally correct attitudes for the sake of conversation, but try *Acting* on them and you'll be damn lucky to attain Kilburn!

Barbara Conway

## Invaluable

**Software Vu-Calc Price £1.25**  
Micro ZX81 Supplier Sinclair/  
Retail

**A**t the give-away price of £1.25, *Vu-Calc* for the ZX81 must be about the best value on the market. Indeed, it might be even worth buying one of Uncle Clive's

little black boxes, just for this program. Basically, *Vu-Calc* does for a matrix or table of numbers what the pocket calculator does for a single number.

An ideal means of keeping household accounts, the program enables you to store words and numbers in a table made up of 26 rows and 36 columns. Each of the 936 pigeon-holes can be connected by arithmetic formulae

using the operations  $\times$ ,  $+$ ,  $-$ , and  $\div$ .

Of course, it is not possible to display all of the data at once. By using the cursor to move around the table, different 9-row by 3-columns can be displayed and copied to a printer if required.

Besides being suitable for domestic book-keeping, *Vu-Calc* can prove invaluable to the small businessman. Not only would it be possible, for instance, to quickly recalculate the price list and attendant VAT payments at the time of a

20% sale reduction — with the minimum of effort it would also be possible to recalculate the value of stock. As well as carrying out financial analyses and producing budget sheets, *Vu-Calc* enables the businessman to experiment — to explore the effect on profits of changes in key prices. For small scale uses this *Vu-Calc* is just as effective as its famous cousins, which cost many times more.

Tom Russey

## Antiquity

**Program Terra Force Micro**  
Spectrum 16K Price £2.49 Supplier Firebird Software, Wellington House, Upper St Martin's Lane, London WC2H 9DL

**F**irebird is the brand name of British Telecom's software wing (geddit?) but on this showing, flaming Firebird is about as dynamic as that cold turkey, Buzby.

When they could have produced a truly original game, based on B.T. experience (eg, find a public call box that's empty, hasn't been used as a toilet, actually works, etc.) they've served up that old favourite, *Centipede*.

Not that the inlay note indicates this... Terra Man... must defend his home planet and the Moon against Ygothulu

the planet devourer and his marauding hordes of Demon Bombers and Solar Pods. The Solar Pods move in chain formation, zig-zagging down the screen, the Demon Bombers bomb you (what else?) and you shoot them all.

B.T. wouldn't claim they were offering the latest in communications then sell you two tins and a length of string, would they, so why disguise this arcade antiquity?

However, it is a fair version of the game with some attractive graphics and the cost is reasonable, though you shouldn't pay more than bargain price for such outdated programs.

It's not desperately fast, and I suspect there's a fair amount of Basic in it, but if you want a *Centipede* variation, it's acceptable.

John Minson

## Credible

**Program Starstrike Micro**  
Spectrum 48K Price £3.95 Supplier Realtime Software, Prospect House, 32 Sovereign Street, Leeds LS1 4BJ

**R**ealtime has already produced a near perfect *Battlezone* game in *Tank Duel*; now they've done the same for *Star Wars*. Your mission is to shoot out reactor cubes having flown to the planet, across its surface and along a trench. Your reward is a view of the planet exploding then hyperspace and the next mission where it all happens

again — only faster!

*Starstrike* is not only impressive because of its wireframe 3D graphics, though they're so smooth and credible that flying your starfighter is genuinely invigorating: it's also highly playable, with a beginners' level simple enough to give anybody a fair chance, after which you'll be hooked.

A minor complaint is the lack of high score table, but this game actually started my adrenaline flowing, and for that I'll forgive it almost anything. Right, that's the review written... can I have another go now?

John Minson

## Limited

**Program Family Quiz Micro**  
BBC B Price £12.95 Supplier  
Blandford Press, Link House,  
West Street, Poole, Dorset.

**W**hat is a Buridan's Ass?  
No, I didn't know  
either. It's an example  
of a general knowledge ques-  
tion from the quiz book edited  
by Elizabeth Young and inclu-  
ded in the *Family Quiz*  
package. At £1.50 the book's  
1300 questions and answers  
offer good value for money.

plenty of fun and a chance to  
learn intriguing facts. But why,  
oh why, did they ever try to  
make it into a computer  
package?

Damian Richardson's  
computer version presents a  
menu for selection of cate-  
gories and number of ques-  
tions per round. Then it offers a  
random set of questions in the

appropriate category and  
waits for your answer. What it  
cannot do is tell if you are right!

A human inquisitor can inter-  
pret human answers, allow for  
variant spellings, and accept  
descriptions that do not follow  
the standard answer word for  
word. This program cannot. It  
has very limited powers of  
discretion. It refuses 'GREY' for  
'GRAY' but accepts some plu-  
rals. It will extract its ideal  
answer words from a longer  
phrase but with weird results.  
For *What is two and two*, the  
answer *Two and two is not four*  
would be accepted!

If the program thinks you got  
it wrong it tells you its answer.  
At the end of each round it tells  
you your score.

Buridan's Ass is an indeci-  
sive man. I'm not — I do not  
recommend anyone to pay  
£11.45 for this program!

Dave Watterston

## Shop floor

**Program Trouble in Store Mi-  
cro** Oric 1/Atmos Price £6.95  
Supplier Orpheus Ltd The  
Smithy, Unit 1, Church Farm,  
Hatley St George, Nr. Sandy,  
Beds. SG19 3HP

**T**his innovative arcade  
game is set in a fictional  
department store, 'Har-  
ridges'. The player controls  
the store manager who must  
hop from ledge to ledge with  
the object of collecting the key  
to empty the till, thus moving on  
to the next department. But the  
store's weird collection of  
goods has become animated  
and so must be avoided.

Only three keys are used.

They move the manager left  
and right and enable him to  
leap onto a platform to avoid  
the manic merchandise.

*Trouble in Store* has  
smoothly moving sprite gra-  
phics, a continuous musical  
accompaniment (which can be  
turned off), and an intriguing  
surprise. Listen to the burst of  
noise that heralds the start of a  
game and with just a little  
imagination you will hear  
your Oric speak!

This state-of-the-art pro-  
gram demonstrates that Oric/  
Atmos software can equal the  
best that is available for other,  
more popular micros.

Vic Fielder

## Irritating

**Program Plan and Design your  
Garden Price** £14.95 Micro  
Spectrum Supplier Blandford  
Press, Linte House, West  
Street, Poole, Dorset.

**A**s far as I am aware,  
there is no other pro-  
gram to help you plan  
your garden, that fact and a  
pretty box may get this pro-  
gram far more attention than it  
deserves.

My copy didn't even have a  
booklet or explanatory leaflet,  
giving loading and user in-  
structions (the vague blurb on  
the back of the box didn't count  
at all); this was particularly  
irritating when typing in details  
for the 'diary' section.

One would expect from a  
program purporting to 'Plan  
and Design your Garden' that  
certain questions would be  
asked, like the size of the  
garden, soil type and the  
amount of light it got — but no.  
All you are given is a blank TV  
screen and primitive etch-  
a-sketch drawing facilities that  
are an insult to current graphic  
achievements on the machine.  
The program was slow to re-  
spond to key presses and the  
information stored in the data  
base of the *Diary* grossly in-  
adequate.

The book itself, at £3.95,  
would make a useful and enter-  
taining stocking filler, but the  
book and program at £14.95 —  
forget it!

Lolita Taylor

## Misspelt

**Program Holy Horrors Micro**  
BBC B Price £6.95 Supplier  
Romik Software Limited, 272  
Argyll Avenue, Slough, Berks.

**G**raphics are still rare in  
Beeb adventure games  
so Clive Webster's new  
work is welcome. Despite the  
blurb it is a conventional ad-  
venture, though one with an  
interesting story background.  
Unfortunately it has faults.

There are some things no  
program should do: make hor-  
rendous spelling errors in the  
opening lines; fail to give in-  
structions on screen or in the  
packaging; omit a Save routine;  
leave your micro in such a  
mess you have to switch off to  
restore order. *Holy Horrors* is  
guilty of them all.

The background story sug-  
gests that humble peasants

were known as surfs (either by  
analogy with Smurfs or in tri-  
bute to washing powder). After  
a snazzy 'Good Luck' message  
the screen waits ... and waits  
without asking you to touch a  
key to continue. When a pic-  
ture has been drawn a couple  
of lines of text appear below it.  
Your next key press banishes  
the image, moves the text to the  
top of the screen and some-  
times adds extra information.

As for the lack of Save rou-  
tine — that just means I'm not  
likely to play an adventure  
again unless it is really grip-  
ping. The need to switch off to  
restore the Beeb's default state  
is like a hangover from Spec-  
trum days.

All in all these faults are  
annoying and the game is just  
not good enough to compen-  
sate for them.

Dave Watterston

## Pitched

**Program Sound Generator Micro Spectrum 48K Price £6.95**  
Supplier Park Gate Publishers,  
24 London Road, Apsley, Hemel Hempstead, Herts.

**W**hy is the Spectrum like a good Victorian child? Because it is often seen but not heard.

Sadly, the only way to annoy the neighbours with the constant thump of *Space Invaders* biting the moon dust is to use a hardware peripheral, but there are ways to liven up the rather mundane 'beep' with software utilities such as this.

*Sound Generator* presents nine parameters, from starting the sound with a fraction of the Spectrum's clock cycle, to four pitch controls which shape it. These are easily altered using

the keyboard top row. One great advantage of the system is that you can hear the sound at any stage of creation, and revise it if desired.

Once satisfied you can move on to the next sound — the program has room for 29 — or save it to tape, to be loaded as a block of code and recalled when desired. As the data occupies the print buffer this could limit its use in some programs.

In its favour, *Sound Generator* uses interrupts, meaning that other action is not visibly slowed by its operation. The instructions are sufficient though a little more information would have been useful; even so the program is friendly and is great fun to experiment with. If you need such a utility I can recommend it.

John Minson

*Galaxy* is an excellent version of the early arcade hit *Galaxians*, and *Mr Wimpy* and *Hunchback* are both very enjoyable and well written games.

Although the standard of the games is a bit variable, this cassette is still very good value

at just over £1 per game. There are several very enjoyable games on it, not perhaps quite as sophisticated as some of the more recent releases, but good fun all the same.

Richard Corfield

## Wild West

**Program California Gold Rush Price £2.99 Micro Commodore 64 Supplier Software Projects, Bear Brand Complex, Allerton Road, Liverpool**

**I**t is surprising to come across a new game for the 64 as basic as *California Gold Rush*. It is essentially a very simple grid type of game — you know the one where you score points by enclosing rectangular areas by moving ■ around the edge of them. In this game, the setting is a gold mine and the grid is made up of the tunnels in the mine. For every block of tunnels you walk round, you collect a number of bags of gold corresponding to the area enclosed. However, since the setting is the Wild

West, there are a couple of Indians after you. Contact with them is fatal, and as the game progresses more Indians appear, and they start to shoot arrows at you just to make things a bit more exciting. Once you have completed one screen, another slightly different one appears and you start all over again.

This is really not a very interesting or exciting game. The play is quite straightforward and lacks variety. As a result ■ soon becomes repetitive. The graphics and sound are OK, but they are also pretty simple, and they are not lively enough to lift the game above the ordinary. But £2.99 is hardly a rip off though.

Richard Corfield

## Favourites

**Program Select 1 Price £12.49 Micro Commodore 64 Supplier Computer Records, 51 Napier Place, London W14 8LG**

**S**elect 1 is an interesting innovation in computer game. It contains no fewer than 12 games, all of which first appeared some time ago at full price (£6 to £9). This collection is available at only £12.49, and so it represents a considerable saving over the original price for the games.

The games were first published by four different software houses and they include a number of old arcade favourites and a couple of adventures. Firstly, the adventures — *Ring of Power* is a fairly routine fantasy adventure, but *Denis*

through the *Drinking Glass* is unusual and entertaining. You take the role of Denis Thatcher striving to escape the political jungle. On your way, you meet a number of famous figures, like Ken Livingstone, Mary Whitehouse, the Pope, etc, but you must avoid Maggie at all costs, or else you will have ■ listen to her latest speech.

The arcade games are a mixed bunch — some good, some indifferent. *Hexpert*, *Purple Turtles*, *Cosmic Commando* and *Star Base Defence* are all perfectly competent, but unexciting games. However, *Moon Buggy* is a good version ■ the popular arcade game. Likewise, both *Scrabble* and *Kong* are good arcade derivatives, and they should appeal to fans of the originals. The remaining three games are all very good —

# Machine Review

## Better late than never

The Enterprise computer has finally been assembled in one piece. Andrew Pennell takes it apart again

**S**tardate 0301-1985, this is Captain Kirk reporting the landing of the Enterprise, around 12 months late. Has anything happened while I've been away...

The micro with the longest running delivery delay saga has finally been released to the world. It was originally shown at the 1983 Personal Computer World show, scheduled for release in early 1984.

After numerous promised delivery dates, price rises, a laughable number of name changes and a similar 'Rom overflow' problem to the QL, the machine has finally appeared, called the Enterprise 64, costing £349.95.

The question is, is it worth the wait?

The Enterprise comes in a dark grey case, most of the keys being similarly coloured, except for the blue function keys, green editing keys, and a red stop key. These combinations, combined with the seemingly squashed front of the case give the machine a rather cheap appearance. To the right of the keyboard is a joystick, which replaces the cursor keys of other machines, and above the function keys is a hinged plastic cover, under which strips of paper can be placed to label the keys. On the left of the machine is the Rom slot, and along the back are connections for the TV, a monitor, cassette sockets, a serial/network port, a parallel printer port, and two joystick sockets. While this is a good selection, there is a snag — with the exception of the TV and cassette sockets, the others are all totally non-standard. The cost of proper sockets was obviously too much, so they are all just edge connectors extended on the edge of the PCB, Spectrum-style (none of them have a proper polarising slot either, so any plugs can be put in upside down, with potentially disastrous results. You will have to wait until Enterprise release their forthcoming adaptor leads until you can connect your monitor, printer, etc).

Although there is no on/off switch, it does have a *Reset* switch on the back. When pressed once, it gives what is called a warm start — so you don't lose your program, but if pressed twice it will completely reset. On the right is the expansion port, with a loose plastic cover, into which any add-ons will plug.

An important feature of any micro is the keyboard, but unfortunately the Enterprise one is quite awful. It looks as if it's going to feel good, but as soon as you touch it you realise it isn't. Inside it uses a membrane very similar to the QL keyboard, which itself has been universally disliked. Somehow, though, the Enterprise one is actually worse than the QL's — indeed, it is the worst keyboard I have ever used since the launch of the Spectrum. In case I was wrong, I took it to my local

computer club, and everyone seemed to agree with me — ugh! It is possible to produce a good keyboard with membrane technology, as my Apple add-on proves, but Enterprise do not seem to know how.

Inside the machine is a neat PCB containing much of what you would expect, the processor Z80, some Ram, and a lot of TTL chips. The most interesting components on the board are two custom chips, little flat square devices with an awful lot of pins. One is labelled 'Dave', and is responsible for sound generation and memory decoding, while the other is 'Nick', and covered with a large copper heatsink. These custom chips are responsible for most of the Enterprises features — and most of the delivery delays too.

When writing the Rom for the Enterprise, the 'QL phenomenon' occurred — the 32K allocated for the operating system and Basic proved to be not enough, so it was decided to use a plug-in external Rom cartridge, within which the Basic lies.

Within the machine is a 32K Rom containing the operating system, known as EKOS. Unlike the QL 'dongle', the Enterprise one is a permanent feature, in a neat box, and which plugs into the Rom slot. When you get another language, you simply unplug Basic, and plug in, say, Lisp. If you power up with Basic disconnected, you enter the word processor within the operating system. The standard machine has 64K Ram, but there will be another model with 128K Ram apparently some time in the future. No bets on when, though.

**T**he word processor is not *Wordstar*, or even *QL Quill* for that matter, but it does work and is relatively fast. It has the advantage — which the QL's *Quill* does not — of being permanently resident on Rom. The trade-off is that it is pretty crude, with the barest of features — notable missing features are Search, and any block move/delete control. The major problem with it is its print-out option. If you enter your text in 40 column mode, which is likely as few televisions can cope clearly with 80 columns, you can only print it out in 40 columns, regardless of your printer's width. You also can't send any control codes at all to your printer. The printer lead I was supplied with was hand-built, and rather Heath Robinson in construction. It was also very difficult to plug in, but hopefully these features will all be absent on production printer leads, when available.

The Basic on the Enterprise is generally excellent with the all too common exception of the speed with which it runs. Ignoring this, I

think it is the best Basic on any home micro, including those found on the Beeb and the QL. It offers very nice 'structured' features, syntax checking and is easily extended with machine code.

Basics are becoming more and more like Pascal with every new machine (MSX excepted), though no micro yet offers Apple's MacBasic option of making line numbers entirely optional, though the structured Basics mentioned all could in theory. It has *If/Then/Else*, *Do/While*, *Do/Until*, long function definitions and procedures (though they are treated as functions with no parameters), and a *Case* statement. It is also the only Basic I know of to support parameters passing by reference and not just value — this will please 'real' programmers used to other (supposedly) superior languages. Lines are entered with a neat screen editor, using the joystick to move the cursor about, and as this editor is in the Rom then most other languages will also use it, and all lines are syntax checked on entry. A suitable error message is given if it is incorrect, then the joystick can be used to move the cursor back up the screen to correct it. As with other syntax-checking Basics, it's rather fussy about where you put the spaces within the lines, but a very nice feature is that it automatically indents lines within *For* and *Do* loops — again this is in MacBasic, but a first on a home micro. It not only makes listings far more legible, but shows up programming errors too.

**P**robably the most important feature of the Enterprise is its graphics abilities; Basic supports much of the machine's potential. After a power-up, there is around 80K available, but this decreases depending on which graphics mode is in use.

Basic supports a bewildering array of modes, not very well explained in the manual. Normally, you are in 40 column text mode, but there is an 80 column mode that takes an extra 18K of memory. The other graphics modes divide into two sections — Lo-res and Hi-res. There are four sub modes in these, and they determine the number of colours available, trading off with horizontal resolution.

In all modes, there are 180 pixels vertically; in 2 colour mode, there are 640 pixels across; in 4 colour mode there are 320 pixels across; in 16 colour mode there are 160 pixels; and in 256 colour mode there are only 80 pixels. These modes take up around 14K.

The Lo-res modes are similar, but taking up around 8K by halving the horizontal resolution. There is also an 'attribute' mode, giving a Spectrum-like screen. Any of the displayed colours can be chosen from the full palette of 256 colours using either straight numbers or a useful RGB function. The palette is hardware controlled, allowing instant animation when changing colours. There are numerous plotting options, including ellipses, circles, and filling areas, and all work pretty

# Machine Review

fast, though, as on the QL, text output on the high resolution screen is rather slow. Other graphics modes can be generated using the custom chip, including mixing of screen modes à la Atari, though they are not directly accessible from Basic. Included on the demo tape is a routine that turns the screen into a 640 by 320 display, of 80 by 50 rows of characters, though it uses up 40K of memory in doing so.

The sound chip — 'Dave' — is an equal to the current leader in the field, the Commodore 64, though my particular machine had an intermittent problem in this area. It has four sound channels with an eight octave range, white noise, high and low pass filtering and ring modulation. Basic supports it well, though full use of it can only be made via machine code.

The theme of the Enterprise is 'obsolescence built out', referring to the expandability of the machine. Although the 280 can only normally address up to 64K, the Enterprise has a paging mechanism that allows up to 4 megabytes of Ram to be added (much like the way the XP system works on the Spectrum).

However, unlike the 68008 in the QL, it cannot be accessed directly, which has three consequences — the operating system is more complex programs run slower as they have to page Ram in to read it, and languages have to be extensively modified to allow proper use of the extra memory. EXOS allows for this, and also for external Roms to add languages — BBC style, devices (such as disc drives) and Basic extensions — QL style.

A 128K version of the Enterprise machine should be available next year, along with Ram packs and disc drives, but judging by past performance I approach Enterprise's delivery dates with more scepticism even than Sinclair's.

**A**t present the 64K version is only available in very limited quantities, but should be around in volume by February.

At £249.95 the machine is not as good value for money as it would have been if it had been on time (and £189, as originally intended). Now it must compete with the Amstrad, QL and MSX clones. Nevertheless, it does have advantages. It can access more memory than any of them (though is not as easily accessible as on the QL). It also has superior graphics, and an excellent Basic.

Disadvantages are its terrible keyboard, and difficult connectors.

As with all new machines, there is a dearth of software, but this will apparently be cured in the short term by IS Software.

The biggest problem for the machine, though, will be getting over the credibility problems created by the machine's late arrival and its identity crises last year which resulted in the machine being the Samurai... then the Elan... then the Flan... then the Enterprise.

AMSTRAD CPC 464

## THE MOORS CHALLENGE

### THE MOORS CHALLENGE

£6.95

An ancient game of strategy and cunning. 'Capture' your opponents counters to win. Play against your Amstrad CPC 464 at any of five skill levels, from simple to advanced or play against a friend, you can even make the computer play against itself.

### THE ROYAL QUEST

£6.95

Can you discover the object of your quest and then complete it? A classic text only adventure, with dozens of problems to

keep you perplexed for weeks. Features include save game facility and very large vocabulary.

### ROLLABALL

£8.95

A challenging game of skill, relying on quick wits and steady nerves. Can you keep the ROLLABALL in motion?

All you have to do is slide a piece of track in its path to divert it, trouble is the tracks always disappear when the ROLLABALL moves over them. A very addictive one player game.

Send cheque/P.O.'s payable to...

STONEBURN, WEST LOTHIAN EH47 8AP

## Order us about...

**HURRY!**  
Order before the end  
of this year and claim a  
special £1 discount...

Here's how to get a pristine copy of Popular Computing Weekly, delivered by a uniformed representative of Her Majesty's Post Office, every week for a year. Or, if you're watching the pennies, for six months.

Normally, it only costs £19.95 to get first-class delivery of your first choice magazine for a full twelve months, and a measly £9.98 for half a years worth of Popular Computing Weekly, weekly.

But if you order before this year comes to an end - that is by December 31 - then we'll reduce the cost of a full year's sub by a further 100 pence to a low, low £18.95

Order your PCW subscription on this special order form, now.

## about 50 times a year.

### Popular Computing Weekly First Class Subscriptions Order

Please remember to add £1.00 for postage

Computing Weekly for

12 months at £19.95 - now just £18.95 if you order

by 31st Dec 1988

Overseas Orders

£1.00 month for £18.95 - now only £19.95 if you order

by 31st Dec 1988

# MEGA-SOUND

## FOR SPECTRUM 48K

### Compatible with ZX Spectrum +

### Achieve amazing sound capabilities that your Spectrum has been lacking.

The Cheetah Mega-Sound simply plugs into the user port on the rear of your computer and enables the Spectrum sound to be amplified through your T.V., providing you with a whole new sound dimension. The Spectrum "Beep" will also be amplified through the T.V., ensuring confidence when pressing keys during programming.

### Truly Amazing

## at £10.95

Prices include VAT, postage & packing.

Delivery normally 14 days.

Export orders at no extra cost.

Dealer enquiries welcome

Cheetah products available from  
all good computer stores

## Selective changes

A treat for Vic 20 machine code programmers — Bit Change Studies with M/C Operators by Chris Cattanaach

**T**his program, written for the unexpanded Vic 20, allows one to experiment in a mixed Basic/Machine Code program, with some of the less well understood mnemonic code terms. Shift left and Rotate right or ... No! Not a new dance, but a useful way of selectively changing the individual bits of a number.

Before entering the program in the Unexpanded Vic 20 (Program One), it is necessary to set aside an area where one can store the machine code, without fear of it being over-run with Basic. This is accomplished by entering Poke 63, 28 and Poke 56, 28, which drops the top of memory from 7679 to 7168. One now has the region from 7168 to 7679 to place the machine code. If the program is to be Run on an expanded Vic, a different procedure is called for (for which see later).

Upon *Running* the program, one is invited to give a number of less than 256, which is then printed out in binary, in a well spaced format, and highlighted in red. The number, which is also shown in decimal, is then poked into a selected address 7191 (7600 on expanded (16K) Vic), ready for loading into the accumulator.

One is then invited to choose the mode of interaction between the given number and another number, yet to be supplied. This can be either 'And' 'Or' or 'Eor' (Exclusive Or). If one of these is chosen, the second number is then requested, and upon being Entered, is similarly displayed on the screen in binary, immediately under the first number. This number is also poked into an address 7195 (7605 on expanded Vic).

The Sys (7168) command, (Sys 4091 for Expanded Vic), then initiates a machine code program where the first number is loaded into the accumulator and interacted in the chosen manner with the second number. The result is stored in the address 7199 (7610 in expanded Vic), and then when the program returns to Basic, it is printed out in binary beneath the first two numbers. One is thus able to discern at once how any of the eight bits has been changed in the relevant byte.

One is also given the choice of observing the effect of acting upon the first number to be loaded into the accumulator, with the instructions *Asl* (shift left one bit), *Lsr* (shift right one bit), *Rol* (rotate bit left), and *Ror* (rotate bit right).

If the program is Run on the expanded Vic 20 (16K), a space must again be first reserved for the machine code, safe from the actions of Basic. This is done by *Running* the short Program 2 every time the computer is first switched on. This moves the start of Basic to 8192, and reserves the section

from 4066 onwards for machine code. As described in the Commodore Programmers Reference book, the screen address has now been moved to 7680.

Program 2 should be saved for future use,

before being Run. After being Run, it is automatically erased from memory once it has done its job. It is also necessary to change the three machine code storage addresses and two Sys commands indicated in the above article. Changes must also be made in the contents of the two Data statements at lines 900 and 905. Table 1 shows the changes to the Listing which must be made when the program is Run on the expanded Vic 20.

# Be the master of 49,152 pixels

Get all your pixels on your Spectrum completely under your control. Dominate their existence. Mastermind their every move. And do it all in machine code, so they move fast to produce exactly the amazing displays you really want.

Here's a great new book from the Sunshine people, all about machine code sprites and graphics on the Spectrum.

Read it, understand it, and then start to move those pixels. And remember, with this new book you'll discover the secret of the shrinking window!

Look out for the Sunshine range in W.H. Smith's, Book's, John Menzies, etc., or leading retail firms and all good bookshops. Dealer enquiries: 01 437 4347

## A sticky wicket

We can't provide the furry dice, but try Stickers for any BBC  
by Andrew Heptonstall

**Y**ou are bound to have seen car stickers with the phrase 'I love something'; the word 'love' being replaced by a heart shape. This program for the BBC model B (model A owners change line 60 to Mode 4 and line 150 to Mode 5), will produce a sheetful of such stickers providing you have a screen dump program for your printer. If you don't have sticky paper,

you will need to stick it on with 'sticky tape'. You must type in your message (not more than 14 characters) and press Return. Alter lines 230 and 240 to the correct commands to operate your particular screen dump program.

### Program Notes

Line No

60

Selects screen mode.

60

70-110

Calls PROCcharacs.

Dimensions array and sets up screen.

120-130

Type in message, and check length.

170-220

Prints message and heart on screen seven times.

230-240

Calls up screen dump.

### Procedures

PROCdouble Works out how to print writing double normal height.

PROCdisplay Prints double height message.

PROCcharacs Defines user-defined characters for heart shape.

## Screen and screen again

Jeff Tope presents a Screen Dump routine for the QL user with a Seikosha GP250X printer

This program (or rather, extended procedure!) produces a copy of the screen to a printer — specifically, in this case, the Seikosha GP250X. However,

the program is liberally scattered with Rem statements, so it should not prove too much of a task to convert it for use with others.

You can use this program with *Easel* by Saving the screen and Loading it from Basic — then dumping it with the procedure.

```

100 REMark Copyright Jeff Tope October 1984
110 REMark Screen dump for SEIKOSHA GP250X graphics printer documented to permit
    easy adaption to other printers
120 DEFine PROCedure JTCOPY
130 LOCal scrstart,rasterstep,rasterlen,scrend,scrlocation,b,power2,pline,ypix,b
    yte,ybit,usebyte,byte2,yprint
140 REMark local variables
150 scrstart=131072+128*6+4
160 REMark start of screen + 6 pixels down + 16 pixels across ( 8 pixels = 2 byt
    es )
170 rasterstep=128
180 REMark no of bytes in one line (row) of screen
190 rasterlen=110
200 REMark no of bytes which represent 480 pixels across screen
210 BAUD 2400
220 REMark baud rate of RS232 for printer
230 OPEN#4;seric
240 REMark channel 4 opened for output - Note use of 'c' option to linefeed -NOT
    E ALSO PRINTER SET TO CR + LF TOGETHER , NOT AS FOR A SPECTRUM specifically dip
    switch No 1 set off
250 RECOL 0,0,0,0,7,7,7,7
260 REMark turn screen to black and white - black,blue,red,magenta goto black ;
    others goto white you might wish to adjust this but remember program only looks
    at RED pixels (MODE 4) or a colour with a RED component also in low res (mode 8)
    the blue component is also used - so both red and blue components must be set
270 scrend=scrstart+128*209+rasterlen
280 REMark screen end is 209 lines + No of bytes for each line long -this works
    in conjunction with the initialize program (BOOT)
290 FOR scrlocation=scrstart TO scrend STEP rasterstep*8
300 REMark step through screen by rasterstep * No of pixels on printhead
310 DIM b(479)
320 REMark array for holding print data - 480 elements -note dimensioning here a
    utomatically resets all elements to zero for next printline
330 power2=1
340 REMark simple counter for setting pixel - initial setting here for whole lin
    e
350 FOR pline =0 TO 7
360 REMark count through pixels on printhead
370 FOR ypix=0 TO 119 STEP 2
380 REMark step along line looking only at half of colour (RED in MODE 4 ; RED a
    nd BLUE in MODE 8 -see Concepts Memory Map)
390 byte=PEEK(scrlocation+pline*128+ypix+1)
400 REMark get byte of memory for 8 pixels in one line
410 ybit=7
420 REMark initialize counter for using byte to full
430 REPeat usebyte
440 REMark loop for draining byte of information
450 IF ybit<0 OR byte == 0 THEN EXIT usebyte
460 REMark has counter finished or is byte empty of information approx equal use
    d in case of numeric error -although non have yet been found

```

```

470 byte2=byte MOD 2
480 REMark get least significant bit of the byte that remains

720 REMark reset printer for text
730 END DEFINE procedure_JTCOPY

```

## You've got your QL hardware. You've got your Psion software.

## Now get your Sunshine book.

Just released from Sunshine is the latest book from the highly acclaimed QL Classics series - and it's called *Quill, Easel, Archive & Abacus on the Sinclair QL*. All these packages, which are included with every QL sold, are recognised as powerful in their own right, but when working together with one another, they become highly effective problem-solving tools for business.

Alison McCallum-Varey's book introduces you to all the four packages, but, most importantly, shows you exactly how to run them as a complete system.

This book, essential for every QL Owner, will expand the day-to-day use of your QL, letting you run Quill and Archive in tandem for instance, and then outputting the results for graphic interpretation by the Easel package.

If you've Quill, Easel, Archive and Abacus on your Sinclair QL, then you need *Quill, Easel, Archive and Abacus on the Sinclair QL*.

This brand new Quill, Easel, Archive & Abacus on the Sinclair QL book is the only book of the kind available for the QL.

It shows you how to use Quill, Easel, Archive & Abacus on the Sinclair QL.

# A step backwards

One step beyond just joining the dots — Linear Regression for the CPC464 by D Rodwell

**P**lot is a program which accepts any reasonable number of x and y co-ordinates from the keyboard and displays them as a high resolution plot on a 300 by 300 pixel grid. The scales can be chosen by the user and modified if so desired.

Once the scales have been confirmed the best-fit straight line is displayed together with its equation. The user is then able to use it to calculate any x or y value. The

correlation coefficient is also given and this provides a guide to the fit of the regression line.

## Program Notes

### Line No

- 440 X and Y ranges are scaled to fit the 300 by 300 pixel grid.  
470 The pixel position of each given point is calculated.  
510-540 Individual points are plotted as a plus sign and two or more coinci-

dent points are plotted as an asterisk.

The X scales are drawn.

The Y scales are drawn.

The X and Y axes are drawn.

Labels and title are printed.

Sets up text windows to the right of the graph.

870-890 Provides an opportunity to re-scale the axes.

910-1060 Calculates and prints the regression equation and correlation on coefficient.

1070-1380 Draws the regression line on the plot.

1370-1580 Enables the user to estimate any X for a given Y or any Y for a given X.

# Open Forum

We are always actively seeking programs for publication — either for Open Forum, the machine pages or Star Game. When sending in a program for consideration, a clear program listing should be sent, together with, wherever possible, a saved copy on cassette. Documentation — usually not more than 1000 words — should start with a general description of the program, what it does, and then some detail of how the program itself is constructed. We pay very competitive rates, according to the length and nature of the program and the quality of the accompanying documentation.

## Lunar Lander

on Spectrum

The object of the game is to successfully land the lunar module on the Moon's surface.

Carefully control how much fuel is burnt and for how long. You must achieve a low velocity when your height is getting low so you do not crash into the moon.

The controls are the number of keys 1 to 9. The amount of fuel being burnt is graphically illustrated by the length of the jet coming out of the module. Your height, velocity and remaining fuel are displayed on the control panel.

### Variables

- a- Positioning for module
- vel Velocity of craft
- fy Fuel left for craft
- t od q Time loop variables

### Program notes

- 5 Call user def. graphics
- 6 Define program variables
- 10-33 Set up positioning var.
- 40-80 Set up display for play
- 100 Check if burn is altered
- 200-233 Calc. new height etc.
- 234-240 Check if crashing
- 500 Draw moon surface
- 605-650 General land sequence
- 655-670 Additional routine if a crash occurred
- 680 Restart routine
- 600-620 Successful land routine
- 1000-1035 User def. graphics

## Arcade Avenue

### Poke-ing about

I want to start this week by offering an apology to those readers who have written in asking me to rehash things that have already been published. I'm getting so many letters in the Avenue these days that I really haven't got the time or space to go over old ground. This applies especially to *Jetset Willy*, so read your back issues of *PCW* or ask a friend or the library if you have none.

However, I do think it's fair to review the way to get pokes into the computer for those Spectrum owners, in particular Stewart of Aberdeen, who have written in complaining of

feeling left behind. You will find that for most games there is a short Basic program at the start that does the job of loading the machine code and auto-runs itself once loaded. If you *Merge* this header program rather than *Loading* it, then once the OK sign appears you can quickly pause the tape and list the header Basic. You will find it has lines to do with loading the code into the memory and as a general rule you can add your poke instructions as a new line after these commands and before any *USR* command. You then can *Run* the Basic and continue the tape as before. The computer will not forget this short Basic program and will carry out the extra instructions once the machine code is in place.

By the way, Stewart, the Forgotten Abbey is through a hidden passage on the bottom right of the Wine cellar in *Jetset Willy*. It's tough to find and tough to play. In response to a lot of demand I will also relent and publish again the infinite

lives poke for Commodore's *Manic Miner*. Glenn Scott of Fife is the most recent supplicant and he also wants to send his thanks for the pokes you sent in for *Blogger*, but now he needs any help you can give to get past Level 9 of *Son of Blogger*. Anyway here, with many thanks to Matthew Crowther of Evesham, are a whole string of cheat programs for the CBM including a treat for those in desperate trouble with *China Miner*.

"Infinite lives on *Manic Miner* type: *Verify* (Return); *Load* "",1,1 (Ret and Play); *Poke* 16573, 234 (Ret); *Poke* 16572, 234 (Ret); *Poke* 16571, 234 (Ret); *Sys* 16384 (Ret). Infinite lives on *AMC* — on slowloader side insert Line 0 *Poke* 11639,255 in the header. Infinite lives on *Motor Mania*: *Verify* (Ret); *Load* "",1,1 (Ret and Play); *Poke* 8648, 255 (Ret); *Sys* 8000 (Ret).

No enemies on *China Miner*: *Verify* (Ret); *New* (Ret); *Load* "",1,1 (Ret and Play); *Load*,1,1 (Ret and Play)

*For T* = 9320 To 16385: *Poke* T,0: *Next* (Ret); *Sys* 64738 (Ret).

Whilst on the subject of *China Miner*, thanks to Thomas Turnbull of Ashington who sends the following. "To stop the sprite collision detection feature: *Verify* (Ret); *Load* "",1,1 (Ret and Play); *Load* "",1,1 (Ret and Play); *Poke* 34493,169 (Ret); *Poke* 34494,0 (Ret); *Poke* 34496,234 (Ret); then *Sys* 64738 to play."

Let's finish the week with a quick high score letter. Mark Hendley of Clowne near Chesterfield has scored a massive 47,329 on *Ani Attack* (all 10 rescued), and on *Chuckie Egg* 150,220.

Tony Keadle

The Arcade Corner is a new section for anyone who enjoys playing arcade games. If you have any comments, from playing tips on difficult games or programs you'd particularly like to praise (or blame!) then write to: Tony Keadle, Arcade Avenue, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

## The Music Box

### BBC package

Having just received my Acom Music 500, I'm holding back the promised information on digital sound samplers for the Spectrum until next week. The Acom system deserves a column to itself.

The Music 500 (produced by Hybrid Technology of Cambridge) is, in effect, a music composition language plus the hardware necessary to make it worthwhile using. How much each of these components contribute to the £199 price tag is hard to say. However, the

hardware — a separately powered disk-drive casing with a couple of dozen chips and a stereo audio output — does take the BBC out of the acoustic dark ages.

There are 13 programmable waveforms, 13 envelopes and seven available stereo positions. Up to 16 notes can be played at once, allowing a number of parts and voices to be used. There are numerous effects available — including ring modulation, frequency modulation, phasing, detuning and pitch and amplitude control. All-in-all, an impressive spec, even if the manual gives far too little information to understand the how and why of the device. (I didn't recognise three of the chips on the circuit board and, until I can track them down, I can't give you much of an idea as to what techniques the Music 500 uses.)

Quite whom the package is aimed at is hard to tell. On the one hand, the software (known as AMPLE — Advanced Music

Programming Language) is sophisticated and not, at first sight, simple to use (despite the manual's promise). AMPLE is a whole new programming language with some apparent affinities to Basic and some to Forth.

On the other hand, the manual's introductory paragraphs and the use of a five-pin DIN socket for the audio output suggest the home market — especially homes equipped with a good quality stereo.

Unfortunately, the manual is less than clear on programming and this column has to be largely a preview since Music 500 will take me several days to begin to get to grips with. This is not a package in the ordinary sense — as it stands, it doesn't make writing or performing music easy, it just provides tools which might be used to that end.

On the whole, the system seems powerful and attractive — if a little overpriced. There is a keyboard add-on available already (but I have no informa-

tion on it) and, no doubt, utilities such as scoring packages will become available. In a couple of weeks, I'll report in more detail on the Music 500's talent for sound synthesis.

Until then, you may like to reflect that Island Logic's composer/synth package for an unexpanded BBC costs around £30 and includes a score writer, while for £12.50 (£9.95 for the tape version) you can buy the excellent Synth-64 composer for the Commodore.

Gary Herman

The Music Box is a new weekly column with news, reviews and readers comments on all aspects of micros and music.

Any readers with experience of computer music making or companies with new product news are invited to write to: drop a line explaining what they're doing to: Gary Herman, The Music Box, 12-13 Little Newport Street, London WC2R 3LD.

### Base Attack

nn Vic20

Unfortunately, only a part of the listing for *Base Attack* was printed in *PCW*, 13 December. Here, with our apologies, is the remainder of the program.

## Book Ends

**Book Machines**  
Guide for Beginners on the Am  
and Price 1080  
**Micro Amstrad**  
Supplies Micro  
Cassette Castl  
24 London  
and Lambodge  
Wells Kent

Here is a slim, rather expensive volume aimed at the Amstrad owner with little programming experience (despite the 'Crash Course in Basic' appendix, I wouldn't advise it for the absolute beginner) who wants to devote his or her time to artificial intelligence.

The book looks at the various procedures necessary to develop an interactive program which will simulate intelligent conversation. This introduces string manipulation, data handling, error trapping, flow charts, etc.

Sadly, it does not go beyond this point to discuss 'learning' programs such as *Animal*.

games playing and other areas of A.I. experimentation.

Younger readers may therefore find it useful, but I'd advise older and more experienced programmers to look elsewhere to a perhaps less friendly, but broader based study.

John Mission

**Book On the Road**

44 Weyth Row,  
Naworth, Ches-  
hire CW5 5ES

Machine code will never be easy to learn, but Steve Kramer here describes it in terms of Basic to good effect, likening the registers to integer variables, etc, and so overcoming the hurdle of comprehending the workings of the CPU. His book also contains several useful appendices and each chap-

ter ends with a summary of the commands introduced.

I felt, however, that something didn't quite work. Perhaps it was the informal style that seemed to fall flat too often. Or perhaps it was because even when the main instructions are understood, there's still a long way to go before they can be used to do anything spectacular.

Still, if you want to go beyond Basic and are willing to put in some hard work, this book could start you off.

John Minson

**Book Micro**  
**Mates.** Simple  
Shapes and Pic-  
tures, Simple Mo-  
vement and Ani-  
mation. Simple  
Music and Sound  
Effects Price  
\$1.95 Micro BBC/  
Electron Supplier  
Granada Publish-  
ing, 8 Grafton  
St, London W1

These are three examples of a new series from Granada for the beginner who has a grasp

of Basic and wants to start using it in more creative directions. Each is small, slim (around 60 pages), colourful and rather hi-tech chic with a dot-matrix type face.

*Simple Shapes and Pictures* shows most signs of padding, with large amounts of space given over to somewhat garish computer graphics. *Movement and Animation* is rather heavier on substance, though light on really useful results, while the *Sound volume* is probably the best of the three.

The main problem is that these books fail to place their topics in context, but despite this lack of interaction, there is a certain amount of duplication, making each volume even slimmer in effect.

While glossy and cheap enough to be an impulse buy from pocket money, it would be more profitable to save up and buy a more complete, workmanlike guide to programming instead of some

John Minton

## Graph Plot

on Amstrad

This program for the Amstrad CPC464 will plot a graph of any function on the monitor, over the range of x values specified by the user. The program will position and scale the axes such that the whole of the screen is used for drawing the graph. The program shows the flexibility of the Amstrad's graphics commands:

## Program notes

100 — 290 Initialisation  
300 — 380 Calculation of points coordinates  
390 — 550 Calculation of scales of axes & position of origin  
560 — 680 Plotting of graph  
1000 — 10080 Handling of errors

The user's function must be entered into line 190 after Def Fnf(x)=. On running, the user will be asked to enter the lowest x value followed by the highest x value, and the step. The computer will then calculate the points & plot them. After the graph has been plotted, pressing [Space] will use the same function, but ask for another set of x values, or pressing [F] will display the function, which may then be altered if necessary.

## 3D Maze

on Vic20

You will need the super expander for this program.

When you run this program you will find yourself in a 3D maze.

Controls:

M to move forward

L to turn left

R to turn right

If you escape you'll be told the number of moves you took.

## Program notes

Line  
1 Defines the size of the maze — 25 locations, 4 views from each location  
2 Puts the numeric value of each view/location into the array  
10-20 Determines at random your starting point in the maze  
70-80 Sets the Graphic Screen and prints the view for the direction you are facing in your starting location  
110-140 You can only press "L" to look left, "R" to look right and "M" to move forward  
180 Increase the number of moves taken

so far

Turn left routine  
Turn right routine  
Checks that a move forward is allowed  
Checks to see if you've completed the maze  
Move your location, you are still looking in the same direction  
Decisions for which walls to draw  
Each line draws a wall  
Your score on completing the maze  
Data statements holding the numeric value of each view.

# Tony Bridge's Adventure Corner

## Best of 1984

1984 has seen an explosion in games of all sorts and adventures have never had it so good. The blockbusters of the year will be well known to you and need no further eulogies from me. Each machine has had a best selling adventure written for it, but unlike arcade games, less well known adventures can be just as much fun to play.

The BBC, for example, has an excellent range from Acornsoft. Each one — *Philosopher's Quest*, *Kingdom of Hamill*, *Countdown to Doom* and the others (including a new list of recently released titles) — is a tough adventure guaranteed to keep even the expert busy. Along with the Level 9 series, these are the obvious programs to think of for the BBC owner, who is rather poorly catered for. But Epic Software has a small selection of very well liked adventures, such as *The Wheel of Fortune* and they're all good value, though without full-colour packaging. I suppose, however, that all you Beebers are currently slumped over your machines trying to become *Elie*.

This two-tier pattern, of big hits and a constant ebb and flow of minor, but nonetheless interesting second leaguers is perhaps more clearly seen in software for those two contenders for the title of Best Selling Computer in Britain — the Spectrum and Commodore 64. For both machines, the past year must count as the great year of success in adventure games as in the other areas of arcade games business and utility programs and add-on hardware. On both sides of the Atlantic, millions of lines of code

have been written and thousands of pages of full colour advertising have been pressed into service in an all out attempt to part computer users from their money.

Although the software business in America is rather different from that in Britain, there is still a small sector of games producers who cannot or will not afford flashy boxes and full page adverts. Judging by the computer magazines that we see in Britain, this division is far greater in the US than that which separates the big sellers from the also-rans here at home.

Let me say now that games, both arcade and adventures, are of a much higher quality in the States — they are written with more style, panache, élan, than the home grown examples. Text adventures is the only arena in which we can compete and those from Level 9, Channel 8 and one or two others compare favourably. But as far as graphic adventures and arcades are concerned, there is no comparison. All those reviewers who roll out the tired old phrase, 'Yet another *Manic Miner* derivative' forget that MM itself is just a rather unappetising version of *Miner 2049er*, a much more addictive and stylish game altogether.

The American game is simple but effective in the extreme. Atari owners will know what I mean when I say that there is no European substitute for the games available — even Commodore games must take a back seat to the Atari catalogue. The Atari machines are the games machines of the present time (and pretty good business machines too) and for the foreseeable future.

Unlike arcade games, top selling adventures are top selling largely because the packaging is better. The honourable exceptions are those games such as *The Hobbit*, the *Midnight* saga, and the Level 9/Channel 8 series which on the whole (Hobbitbugs notwithstanding) display better writing techniques and push back the boundaries further, than lesser programs.

Lower down the adventure charts are games which are just as good as many of those near the top. Among those adventures I found myself returning to during 1984 were:

***Denis Through the Looking Glass* (Applications)**

A Quill'd adventure which many people felt ■ be too far removed from the traditional

hack'n'slay. But the unique use of verse and the sneaky way in which the player is forced to get Denis to a tincture every so often, ensures a good puzzle. It also ensures that the authors will not appear in the New Year's Honours List!

***The Journey (Temptation)***

Not so much for the program itself, although the animation is the equal of *The Hobbit*'s and the scenario is a good one, but because the author, Alan Davis, is a long-time Corner correspondent, and it is always nice to see a good Adventurer-player produce his own program.

***Lords of Time (Level 9)***

Written by another Corner correspondent, Sue Gazzard, LOT has one of the very best Adventure scenarios — any one of nine time zones may be visited by the player, and each has its own unique problems. Programmed with the usual Level 9 flair, LOT was nevertheless a departure from Level 9's previous Tolkienesque adventures and is great fun to play.

***Quest for the Holy Joystick (Delta 4)***

There have been several attempts at comic adventures, such as Denis and Infocom's *Planetfall*, and this modest Quill'd program is one of the better attempts.

It's a very difficult task to write a truly funny adventure and this collection of gaming in-jokes succeeds admirably. Here, you'll find *Valhalla* graphics, *Hobbit* dungeons, Roland Rat and several JSW pokes as well, as well as one of the reasons I come back to the Quest — the appearance of a certain bespectacled, bearded Elf.

The program is very short, though, and should possibly have appeared as a giveaway bonus on the B side of a more complex adventure.

***Suspended (Infocom)***

Although none of Infocom's adventures are far from my computer, *Suspended* is the one to which I return most often, and not only because I have still only just scratched the surface. The original packaging included a playboard on which to keep track of the progress of your six robots around the computer complex, as they try to repair the environmental computers of planet Contra.

I don't know if this feature appears in the recently released version for the Commodore (surely one of the great bargains for CBM adventurers). Such is the nature of Infocom's magic, that each game will be totally different from the last.

Next week I will take another look at some more adventures.

## Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere ■ turn do not despair — help ■ at hand

Fill in the coupon, explaining your problem,

send it to us, and a fellow adventurer may be able to help

Remember — the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Adventure Problem \_\_\_\_\_ on (micro) \_\_\_\_\_

Name \_\_\_\_\_ Address \_\_\_\_\_

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

[POPS/12A]

Castle Of Terror is a superb graphic adventure game set in the 1880's when and where "Dracula" stories abounded. You are in a village near a large Castle in which the secretive Count lives. You must travel about the village, collecting items which may be use to you on your bold mission.

You must also find out what your mission is by talking to the right people. But don't be fooled!

★ Multi-word "English Language" style input

★ Superb, highly detailed graphics

★ Animated characters, special effects and sound.

Surviving is success enough, but escaping with the treasure is the ultimate achievement and won't be easily accomplished!

# CASTLE of TERROR

Melbourne House

## CP/M compatible

Anon of Huntingdon, Cambridgeshire, writes:

**Q** I have heard that with the disc drive the Amstrad is CP/M compatible, but does this mean it would be the same as MSX? Also, I have heard that a Spectravideo is MSX standard, but does this include the SV-318?

**A** With a disc drive attached, the Amstrad would become capable of running under the CP/M operating system. However you would need to purchase CP/M, which is not a cheap item. MSX is entirely different to CP/M, and the Amstrad will not and does not conform to the MSX standard.

Despite all claims to the contrary, the SV-318 is not an MSX machine. It was designed to be, but MSX itself had not been finalised when the machine was first launched. It is therefore not possible to utilise the full facilities of MSX.

## Merged sets

P Johnston of Choppington, Northumberland, writes:

**Q** I have been reading your magazine since I bought my 48K Spectrum over a year ago, and I have finally decided to write for help. My question is as follows: I have begun writing a pontoon game using a compiler, and I need more than one set of UDG's to be available. Is there any way of 'merging' about two or three sets of UDG's into the completed program, and if so please explain this method.

**A** You can use the same method of achieving multiple sets of UDG's that is used by the Basic programmer.

As you know UDG sets can be saved as code, and loaded (above Rantop), in the same way as machine code subroutines. As long as you know the address at which each set starts, it is only necessary to place that address in locations 23675 and 23676 (the address of the first UDG).

You can swap between sets of graphic characters as many times as you like in your program, but can only use one set at a time.

## Wrong correction

G G Robertson of Edinburgh, writes:

**Q** In the 11th October issue, you corrected a statement for a program 'Decimal to Hex Conversion', in the book *Spectrum Machine Language for the Absolute Beginner* (page 23). I put in the correction and ran it, only to find that it only gave the first numbers, stopping at 16. As Kevin Jenkins asked, is it the fault of the computer or the book?

**A** In order to solve your problem, and also to kill any lingering doubts that you might have concerning your computer, I will give an absolutely, definitely, most certainly correct version of the program concerned.

```
100 REM decimal to hexadecimal conversion
110 PRINT "Please input decimal value."
120 INPUT n: PRINT n
130 LET S$ = ""
135 LET n2 = INT (n/16)
140 LET n1 = INT (N - n2*16)
150 LET S$ = CHR$( (n1*9) + (n1/48) * (n1/55 + n1) ) + S$
160 IF n2 = 0 THEN PRINT PRINT "HEXADECIMAL:" S$; "H": FOR i = 1 TO 200: NEXT i: GO TO 110
170 LET n = n2: GO TO 135
```

## Program editing

Merv Astle of Lincoln, writes:

**Q** I intend buying a BBC and Datacorder mainly for extending my knowledge of Basic and compiling my own programs. What do you

think of the Brother EP44 as a printer? It will be mainly used for program editing and listing.

**A** Also, how much are you charged when using a modem (in respect of the phone bill). Are you charged all the time it is connected or only when receiving data?

**A** I would think that the Brother EP44 would be very suitable for your purpose. There are of course other printers which would be equally as good for your purposes as well, but none of these offer sufficient advantages to make me suggest them instead of the machine you have chosen.

As far as use of a modem is concerned, your fear is well founded in that as you are using normal telephone lines when using a modem, you are liable to normal call charges for the duration of your connection.

## Amstrad printer

C G West of Malton, North Yorkshire, writes:

**Q** I am asking for help about the purchase of printers. Amstrad offer a printer unit. I would like to know whether there is any other printer that can be used with the Amstrad and the Sinclair QL.

I have recently seen advertisements for the new Manesmann Tally Spirit MT80 printer, which is said to be suitable for the QL and other home computers. Is this the particular one to choose?

**A** I have received many letters on the subject of which printer to choose for a particular machine. My answer is very nearly always the same...it depends on what you want to use the printer for and how much you are prepared to spend.

The QL and the Amstrad use standard printer interfaces, and thus are able to use most of

the available micro computer compatible printers. The Manesmann is a good example of this. There are however a large number of printers on the market in a variety of different price ranges. You will need to look into the price range you want for the sort of quality you require.

The only piece of advice I would give is that before buying you ask for a demonstration. It ensures that you will not be disappointed at the results when you get your printer home.

Also, get the sales person to put in writing that the printer will work with your micro, and also state what interface you will need to use.

## A Slow operation

Stuart Gregg of Leeds, writes:

**Q** I won a 48K Spectrum with a number of attachments, including a Fuller FDS keyboard, a Fuller box, a Centronics interface, and two microdrives.

Recently, though, the microdrive operation has become very slow. However, it is not the cartridges or the drives that appear to be at fault as I have tested these out on a friend's machine and they work OK.

As the Spectrum is out of warranty, please could you suggest some course of action and some addresses to contact.

**A** I have come across a firm that will be more than willing to advise you as to how to remedy your problem. They are called Mancomp, and as well as repairing faulty Spectrums are also quite willing to discuss your problems with you and offer reasonably cheap, and (more importantly) correct cures.

They can be contacted at Printworks Lane, Levenshulme, Manchester.

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem Peek it to Phil Rogers and every week he will Poke back as many answers as he can. The address is **Peek & Poke, PCW, 12-13 Little Newport Street, London WC2R 3LD**

VIC-20 software tapes and cartridges, 8K Ram, super expander, 4-slot switchable motherboard, joystick books, all in good condition. Will split complete or split. Your offers? Tel: 0362 4437 (Mitchell) now!

**CBM 64** + C2N + £200 software + music composer + 1 sticks - £50 Books + mags etc £300 or exchange for 48K spec + £10 + £200 (w/£5) + £12 2 + joystick + keyboard + extras + £30. Negotiable best system accepted. Tel: 01-863 5113 after 4 pm.

**COMMODORE 64** games over 120 (!) original games for sale on cassette, disk and Rom. Also EasyScript + 6 games. Games Designer, Studio 64 (Music) on Disk. Both purchases welcome. Ridiculous prices! Tel: 01-748 8178 weekend, mornings please.

## Dragons for sale

**DRAGON** software for sale. Dynast disk £15. Rainbow winter cassette £10. Both mint condition. May split. Phone (034882) 243 after six.

**DRAGON 64** software for sale. OS9 disk and manual £10. OS9 Programmer's manual £10. Basic OS disk and manual £30. All mint condition. May split. Phone (034 882) 243 after six.

## Ataris for sale

**ATARI VCS** with 1 joystick, paddles, necessary leads, and 5 cartridges (including Pitfall, Space Shuttle). Good condition. Superb present at only £58! Tel: 01 530 4915 (Wansford)

**ATARI 400/800** software for sale. All originals, mostly cartridges (Inc Pole Position, Donkey Kong etc) £5 each or 10 for £45 or 20 for £90. Tel (021) 749 4603 (Pula)

**ATARI 800XL** with Defender Star, Raiders, Choplifter, and Soccer. All on cartridge under guarantee original packaging £175 or will separate other disk and cassette software too. Tel: 05436 72055

**Week 5: Winners** — Steven Walbank, Western Gardens, Stockford, Birmingham; Billy Smith, Thrill Road, Salford; Jason Somerville, Mosley Cottages, The Avenue, Molesey, Waltham, Surrey; and Rosalee Farrington, Harrogate Avenue, Ford Estate, Merton, Mertonhead, Mertonhead, who share the £50 'pot' and receive £12.50 each.

## Now voting on Week 7 — £50 to win

Each week Popular is compiling its own special software top ten chart — compiled by YOU.

All you have to do to vote is to fill in the form below with the names of your current three favourite software titles (or copy the form on to another sheet if you don't want to damage your magazine) and send it off as soon as possible to: Top 10, Popular Computing Weekly, 12-13 Little Newport Street, London WC2H 7PP.

We will send £50 each week to the person who correctly predicts that week's top three. If there is no winner then that week's prize is automatically added to the chart on which voting is currently taking place, and so on until someone gets it right! (If there is more than one winner that week's prize — whatever the 'pot' stands at — will be split equally between all the correct entries.)

Voting for Week 7 closes at 2pm on Wednesday January 9 1985. Entries received after that time will not be eligible for inclusion in that week's voting. The judges' decision is final. Only one entry per individual per week will be allowed.

## CLONED

Here's a dilemma. *Technician Ted* from Hewson is the closest thing to a *Jet Set Willy* clone I've ever seen.

There are 80 screens, all fairly wacky, things to collect, a little man you must left-right-jump on to various different levels, obstacles that you can just avoid etc, etc. Even the different rooms have little names underneath them a la *Willy*.

Ordinarily I'd condemn it out of hand as boring and dull but the problem is this — *Technician Ted* is such a good clone that it stands out from all the others as actually being fun to play. It could almost be a legitimate successor to the original.

The game has the same touches that made *Jet Set Willy* so clever and professional — precise collision detection, very carefully constructed screens (you can always just manage the obstacle), nicely designed sprites.

Against my better judgement I liked the game. *Jet Set Willy* fans will find it an extremely acceptable stop-gap until *Willy* part three comes out.

**Program** *Technician Ted*  
**Price** £5.95  
**Micro** Spectrum

## BLOCK MOVE

*Fmon* is a machine-code monitor for the BBC that has enough basic features to be more or less the only machine code utility you'd need for small machine-code programming jobs.

The *Fmon* monitor includes within its 3.5K a code relocater, a line assembler, variables that can be user-defined, procedures, and a fairly powerful disassembler.

The monitor has what almost amounts to its own programming language — single letter commands can be linked together to form what are virtual

ly procedures which can be saved on tape. There is also a facility for using the system variable values within a function for tasks like block moves, string searches and so on.

A useful utility.

**Program** *Fmon*  
**Price** £9  
**Micro** BBC  
**Supplier** Fsoft  
PO Box 352  
Brighton BN1 3AY

## OPPOSITE

I've always found the *Mr Men* intensely irritating, but you have to admire Mr Marketing's talent. Mirrorsoft has stamped the *Mr Men* into every one of its educational releases and given the range a visibility (deserved) which it might not otherwise have had.

Latest addition is *Word Games with the Mr Men* which features twin cassettes — *Mr Noisy's Word Game* and *Read with Mr Bounce*. Both teach simple English to young children and make use of a simple overlay to sort out the various Spectrum keys — something we are all in need of.

*Mr Noisy* uses animated graphics to illustrate the meaning of opposites, comparatives and superlatives. *Mr Bounce* explains position words — like, into, on, next and under — by bouncing around the screen. It's a pleasing package and the programs are well written; all you have to do is persuade your kids to use it.

**Program** *Word Games with the Mr Men*  
**Price** £9.95  
**Micro** Spectrum  
**Supplier** Mirrorsoft  
Holborn Circus  
London EC1P 1DO

## GEOMETRIC

Activision has recently released *The Designer's Pencil*, a drawing utility for the Spectrum that is virtually a dedicated programming language. The program uses a system of menus which enables you to manipulate graphics in a variety of complex ways. It isn't merely a matter of the usual ink, paper, left right up down, fill; what you get is far more like turtle graphics.

You can draw a shape, and using a series of loops and other commands, have it repeated over the screen in an organised pattern. There are commands to write text, change drawing speed, fill an area, draw various different sorts of lines, circles, colours and other effects. Like Basic, you can use variables to stand for numbers and in this way change the drawing position in

an orderly way — very good for geometric style patterns.

To get the most from the program, you'll need to spend a little time with it, but it looks a lot of fun to me.

**Program** *The Designer's Pencil*  
**Price** £9.99  
**Micro** Spectrum  
**Supplier** Activision

Marylebone Road  
London NW1

## HEATED

Educational software is a difficult thing to do well and mostly it isn't done well. The only successful programs are those which restrict themselves to providing simple tasks and

pretty pictures for the under fives. So 'O' level physics on the Spectrum at least gets a vote for not taking the easy option.

The program is basically concerned with the heat and light sections of the 'O' level syllabus, the sections follow the obvious format of following a tutorial section with some multiple choice questions.

The light section is actually quite well done with quite a few sections featuring ray diagrams and the like — it could be genuinely useful if you treat it as a revision device, but doesn't really use the computer to do anything clever.

**Program** *Light and Heat*  
**Price** £8.95  
**Micro** Spectrum  
**Supplier** Rose Software  
148 Widney Lane  
Solihull  
West Midlands

## ALTITUDE

*Flight Path* is an aeroplane simulation program with a difference; you do not have to master the fine tuning of dozens and dozens of controls, rather you have to plan the journey in advance and then watch the results.

The program is intended very much as an educational exercise in making reliable calculations and planning ahead, but is still fun for all that.

First you must choose the flight route, taking note of factors like weather conditions, aircraft type and usual flying altitude. Then the distance and bearing of the various journey airports must be calculated with wind speed included.

Having set up the plan, you set your aircraft and, as likely as not, plummet into the sea (since this is a game for schoolkids you don't actually plummet into the sea — you get rescued. Personally, however, I'd like a plummet option.) Ingenious, original and even marginally educational.

**Program** *Flight Path*  
**Price** £9.95  
**Micro** BBC B

## PASS GO

After a few illicit editions, notably Automata's *Go To fail*, an 'official' version of computer *Monopoly* has arrived.

The manufacturer is Leisure Genius which is steadily working its way through the entire Waddington's catalogue.

There will soon be versions for all the major home computers, but the first one is for the Commodore 64.

What it does, obviously, is play *Monopoly* but the screen is displayed — either against the computer, or against other players in a most appealing way. The complete board is displayed edge-on with perspective in one half of the screen giving a general guide to what's where and what is coming up. In the bottom of the screen is the detailed display of the two or three squares around your playing piece; this scrolls along as the piece is moved according to the dice throw.

Most of the tedious elements of the game are removed — if you land on a property the computer asks if you want to buy it and automatically debits your account. Similar credits and debits like collect 200 pounds for passing go and so on happen automatically.

The computer seems to play very sensibly and will bid deftly in the auction should a property be up for grabs. The graphics are neat and traditional, ie, boot, car, ship, etc.

I still don't know why those objects were originally chosen. I mean, does anybody ever voluntarily choose the boot?

**Program** Monopoly  
**Price** £1.99  
**Micro** Commodore 64  
**Supplier** Winchester Holdings  
3 Montagu Row  
London W1H 1AB

## FIREHALL

Whilst there are some doubts over just what role the plus 4 is going to play, the C16 seems to

## Pick of the week

Remember the megagames? Animated epics that required extra memory to work. Remember *Imagine*? The company that mixed financial unsoundness and flash cars in about even measures? The programmers primarily responsible for working on the megagames are now working as an independent unit producing epics for other, less notoriously flamboyant companies — the first fruit of their labours to see the light of day is *Gift from the Gods*, produced for Ocean.

The game is excellent which makes its late (for Christmas) and relatively unexpected release particularly surprising. Maybe it was just ready sooner than expected. It has something of the style of *Tir Na Nog*, but with greater arcade elements — there are more things to dodge and slash at (using Ajax's sword) and more happens more quickly (which is not necessarily a virtue, just a fact).

## DREAD MAZE

The game features a number of Stars of Greek Myth; Orestes — under your control, Clytemnestra — wicked Alexis type character who wants to do in her own kids, Agamemnon — who was himself done in and whose death must be avenged and Electra — Orestes' sister, who is pretty tough and can help Orestes in his search. If

be doing pretty well. As yet there aren't that many programs from independent suppliers, but that situation should change.

*Skramble* is one of the first releases, works on both the C16 and the Plus 4 and comes from Anurog.

*Skramble* is one of those inevitable games that never fails to turn up, you can safely say that any micro lacking a

version of *Skramble* three weeks after its release is going to be a dodo.

*Skramble* involves flying an aircraft over various sectors of heavily armed landscape, so you have to combine extremely deft flying so as not to hit passing mountains with even more deft leaping about to dodge missiles, UFOs, fireballs and all that.

It goes on and on, getting

you find her, she can lead you to useful places in the catacombs that form the playing area of the game. The task is to find six special symbols that, when arranged in the correct order in a special room, will release everyone from the dread maze. This is made difficult because there are various illusions designed to prevent their discovery.

There are various puzzles scattered about the maze and danger lurks in the form of monsters and the evil Gyttaem-nestra who will do what she can to confuse you and kill Electra. To help you find your way around the maze, you have seven tears which may be used to mark rooms. The graphics are excellent, although colour attribute problems rear their sickeningly multi-coloured head occasionally. The backgrounds are a little samey too, but it's compulsive as a game and fairly original.

## STRATEGIC

Go, the deceptively simple but strategically ingenious board

game, has been adapted for the computer relatively few times — perhaps the algorithms to get the computer to play a good game are rather complex.

Possibly the best Go for the computer has just been released by Acomsoft — the winner of a competition to find the best implementation of the game.

The object of Go is to win territory and capture enemy stones (the playing pieces). To win a stone or stones you simply surround it with opposing pieces.

With just a couple of other simple rules the game develops, with practice, into an astonishingly complex and subtle game requiring much pondering and consideration. And the computer plays well — too well for me, anyway.

Even if you are unfamiliar with Go as a board game but generally enjoy playing chess,

scrabble and other traditional games on your computer you should find it very compelling.

**Program** Go  
**Price** £9.95

## GNASHERS

What does teeth care mean to you? Do you ever think about your teeth? Have you ever thought of linking your teeth to your computer? Well, the long days of waiting are over, open your mouth and switch on. Caring for your Teeth has arrived.

What you get is basic text book style information presented with graphics which are mainly static, although there is the occasional Pacman who wanders on and says nasty things that threaten the state of your teeth.

It's marginally better than simply having a textbook with pictures and has a little multiple choice test at the end. For teachers only, though, methinks.

**Program** Caring for your Teeth  
**Price** £5.50  
**Micro** Spectrum  
**Supplier** Deva Educational Software

## CONUNDRUM

The Staff of Zaranol is an adventure from CCS intended for those addicts that are more

interested in the pure problem and conundrum solving type of adventure than the ones with many locations or graphics.

There are a mere 11 locations but the clues are hidden so deviously that the adventure should take ages to solve.

The plot is vaguely sorcerer's apprentice inspired — you serve the mighty Zaranol (who sounds more like a disinfectant than a mighty sorcerer) and let loose an unpleasant demon. Aided by your helper Lan, you discover that you need to know a series of facts before the demon is banished — all you have to do is find them.

The language analysis is basic verb-noun with a vocabulary of under 30 verbs — not spectacular but then it's not meant to be technically astounding — just very hard to solve.

**Program** The Staff of Zaranol  
**Price** £5.95  
**Micro** Spectrum

## In demand

**T**he most popular question one is asked in computing is: Which computer is the best?

My personal evaluation of the state of the microcomputer market is that the demand for games is declining rather more sharply than most commentators realise.

What is clear is that the users of home computers are becoming more sophisticated in many directions, whether it is in the types of games demanded or the range of applications being considered.

The demand is for software which is truly useful, and slowly users are discovering that, though the Spectrum (say) is almost Protean in its flexibility, it is still a little machine. The market for serious applications for home computers is expanding, but the demand is not (for example) for putative educational programs which are more poorly written than most games.

On the one hand, those with home computers are beginning to extend the range of activities for which they use the computer; those who are now considering buying a home computer have a differing set of expectations to those purchasing a year ago. These days I often advise that a more substantial computer is suitable, and now — with computers such as the Advance 86 and the new Apricots — substantial computers are becoming closer to the price of games computers.

In the USA, the IBM PC is quite often used as a home computer (as was the Apple II), and it is just as successful at running games software as any games machine. What the

IBM has, compared to games oriented computers, is a reservoir of serious software written by independent producers: it is very difficult to establish such a base for a games computer, and serious software for home computers is still limited in its scope.

These newer, cheaper, 'serious' microcomputers have a professional software base (usually MSDOS/PCDOS), and do not need to be adapted, tweaked, or stretched, to accommodate proper applications. There is no comparison between the wide range of word processors available under MSDOS, and specific packages such as Quill (QL), Superscript (64), or View (BBC).

Serious computers use standard technologies (eg. standard disc formats) and do not have to be extended to talk to existing software banks. What is more, they are not that different in price to the upper range of home computers — given the extensions needed by computers not originally aimed at a serious market.

Though microfloppies are being produced for the Sinclair QL, the prices of these drives, as an extra, are higher than those for the Apricot, where the drives come as part of the package. There have not been sufficient QLs produced for there to be economies of scale for the vendors of such drives.

For such reasons home computer manufacturers such as Sinclair or Commodore are less likely to be successful with their new machines. Home computers soon become senile and die: in replacing such machines the experience of owning a computer should not be ignored. For most people, it makes more sense to purchase a cheaper CP/M or MSDOS machine than it does to purchase a non-standard system.

Personally, I do not see any home computer ever again being as successful as the C64 or ZX Spectrum.

Remember, that both these computers were characterised by reputedly low reliability, and machine dependent software.

The big boys like IBM with reliable, ever lower priced kit are taking over. They have the reliability, they have the range of applications, they have the software.

Boris Allan

## Seven-up

### Puzzle No 130

The people of the planet Plutonia, which orbits on the far side of the Sun, have the peculiarity of having only seven fingers, four on the left hand, and three on the right.

Like us, they are just celebrating the year that we know as 1985, but, as they have only seven digits, they count in the septimal system. Consequently, the numbers zero to six are the same as ours, but our '7' becomes 10, '8' becomes 11, etc.

Can you say how the year '1985' would be written in Plutonian, and also say which Plutonian years, so far, have consisted of exactly the same digits as their decimal equivalents (AD) (though, of course, in a different order)?

### Solution to Puzzle 134

The correct reading was 90668, upside down this would read as 68906, but, as the reading would have been considered to have 'gone over the top' this would be counted as 189906 giving a difference of 78217.

Clearly the five-digit number must have been made up from the digits 0, 1, 6, 8 or 9 as these are the only ones that read as digits when inverted, 0, 1 and 8 staying the same, but 6 becoming 9 and vice-versa.

The program stores these digits in two arrays, Array A storing the number itself and Array B its inversion value. However, there is one catch. Had the false reading been less than the true reading — for instance 68666 instead of 98666 — then 1000000 would have been added (168666) to arrive at the figures on which the bill was based (Line 110).

```
10 DIM A(5),B(5) 20 LET A(1)=0:LET A(2)=1:LET
A(3)=8:LET A(4)=8:LET A(5)=9 30 LET B(1)=0:LET
B(2)=1:LET B(3)=9:LET B(4)=8:LET B(5)=6 40 FOR
P=1 TO 5 50 FOR Q=1 TO 5 60 FOR R=1 TO 5 70
FOR S=1 TO 5 80 FOR T=1 TO 5 90 LET Z1=A(P)*
10000+ A(Q)*1000+ A(R)*100+ A(S)*10+ A(T) 100
LET Z2=B(T)*10000+ B(S)*1000+ B(R)*100+ B(Q)
110 IF Z1>Z2 THEN Z3=Z2+100000 120 LET
D=Z3-Z1 130 IF D=78217 THEN PRINT Z1 140 NEXT
T,S,R,Q,P
```

### Winner of Puzzle No 134

The winner of Puzzle 134 is D Cassidy of Green Close, Bailoy, W. Yorkshire, who receives £10.

### Rules

If the puzzle can be sensibly solved using a computer, then the winner will have included a listing of the program used to find the correct answer. The closing date for Puzzle No 139 is 18 January.

## LOST KINGDOM

The artifact is just too tempting. Sure, no one has ever returned with it but they didn't have your brains and courage. This treasure is worth any risk. An artifact containing the total history and knowledge of a lost, forgotten civilization! Just think what that could do for your career, for the university museum, and for your bank balance!

Of course, there is the small matter of finding it. The perils en route are sure to be the most fiendishly clever traps and puzzles you've ever faced. You'll need all your skill and daring just to survive. Then there's the ancient curse... but what the heck; if it were easy, it wouldn't interest you. Dr. Jones - would it?
